10.1 Deployment Features	10
10.2 QA & Testing	10
10.3 AI Assistant	10
10.4 Local Storage	10

# RADIANT & Think Tank Complete Features List

## Comprehensive Feature Reference

Version 4.18.0 | December 2024

### Feature Categories

- 1. AI Model Management
- 2. Orchestration & Workflows
- 3. Think Tank Platform
- 4. Billing & Cost Management
- 5. Multi-Tenant Platform
- 6. Security & Compliance
- 7. Analytics & Monitoring
- 8. Developer Tools
- 9. Admin Dashboard
- 10. Swift Deployer App

### 1. AI Model Management

#### 1.1 Model Router Service

Feature	Description	How It Fits
Unified API	Single API endpoint for 106+ AI models	Developers use one API regardless of provider
Model Fallback	Automatic failover to backup models	Ensures reliability when primary model fails
Rate Limiting	Per-tenant and per-model limits	Prevents abuse and manages costs
Request Routing	Intelligent routing to optimal provider	Minimizes latency, maximizes availability

#### 1.2 Model Metadata Service

Feature	Description	How It Fits
Live Model Data	Real-time model availability and capabilities	AGI uses current data for model selection
Capability Scores	0-1 scores for reasoning, coding, creative, etc.	Enables intelligent model matching to tasks
Pricing Data	Input/output token costs per model	Supports cost estimation and budgeting
AI Research	Automated metadata updates via AI	Keeps model info current without manual work

Feature	Description	How It Fits
<b>Admin Override</b>	Manual corrections to AI-gathered data	Admins can fix inaccuracies

### 1.3 Supported Models (106+)

Provider	Models	Specialties
<b>OpenAI</b>	GPT-4o, GPT-4o-mini, o1, o1-mini, o3	General, reasoning, multimodal
<b>Anthropic</b>	Claude 3.5 Sonnet, Claude 3 Opus/Haiku	Reasoning, coding, safety
<b>Google</b>	Gemini 2.0 Flash/Pro, Gemini Deep Research	Speed, multimodal, research
<b>Meta</b>	Llama 3.1 (8B/70B/405B)	Open source, customizable
<b>Mistral</b>	Mistral Large, Codestral	European, code
<b>DeepSeek</b>	DeepSeek R1, DeepSeek Chat	Reasoning, cost-effective
<b>Perplexity xAI</b>	Sonar Pro, Sonar Grok 2	Real-time research Real-time knowledge
<b>Cohere</b>	Command R+, Embed	Enterprise, RAG
<b>+6 more</b>	56 self-hosted models	Custom deployments

## 2. Orchestration & Workflows

### 2.1 Orchestration Patterns (49)

Feature	Description	How It Fits
<b>Pattern Library</b>	49 proven multi-AI workflows	Pre-built solutions for complex tasks
<b>Pattern Selection</b>	Automatic best pattern for task	Users don't need to know which pattern to use
<b>Custom Workflows</b>	Create/modify workflow patterns	Tenants can build their own patterns

**Pattern Categories:** - Consensus & Aggregation (7) - Debate & Deliberation (7) - Critique & Refinement (7) - Verification & Validation (7) - Decomposition (7) - Specialized Reasoning (7) - Multi-Model Routing (4) - Ensemble Methods (3)

### 2.2 AGI Dynamic Model Selection

Feature	Description	How It Fits
<b>Domain Detection</b>	Identifies coding, math, legal, etc. from prompt	Matches models to domain expertise
<b>Task Analysis</b>	Detects complexity, reasoning needs	Selects appropriate model count and modes
<b>Live Scoring</b>	Scores all available models for task	Always uses best current models
<b>Mode Assignment</b>	Selects optimal mode per model	Maximizes each model's effectiveness

## 2.3 Model Execution Modes (9)

Mode	Description	How It Fits
<b>Thinking</b>	Extended reasoning (o1, Claude)	Complex problems requiring deep thought
<b>Deep Research</b>	Comprehensive research (Perplexity)	Fact-finding, literature review
<b>Fast</b>	Speed-optimized (Flash models)	Quick queries, autocomplete
<b>Creative</b>	High temperature output	Writing, brainstorming
<b>Precise</b>	Low temperature, factual	Data extraction, compliance
<b>Code</b>	Code-optimized settings	Programming tasks
<b>Vision</b>	Multimodal with images	Image analysis
<b>Long Context</b>	Extended context window	Large documents
<b>Standard</b>	Default parameters	General use

## 2.4 Parallel Execution

Feature	Description	How It Fits
<b>Multi-Model Calls</b>	Execute 2-10 models simultaneously	Higher quality through diversity
<b>Execution Modes</b>	All, Race, Quorum	Balance quality vs latency
<b>Result Synthesis</b>	Best-of, Vote, Weighted, Merge	Combine multiple responses optimally
<b>Timeout Handling</b>	Per-model timeouts	Prevents slow models from blocking
<b>Failure Strategy</b>	Fail-fast, Continue, Fallback	Graceful degradation

## 2.5 Visual Workflow Editor

Feature	Description	How It Fits
<b>Drag-and-Drop</b>	Visual workflow design	Non-technical users can build workflows
<b>Method Palette</b>	16 reusable method types	Building blocks for any workflow
<b>Step Configuration</b>	4-tab config panel	Fine-grained control per step

Feature	Description	How It Fits
<b>Canvas Controls</b>	Zoom, pan, fit	Navigate complex workflows
<b>Test &amp; Save</b>	Execute and persist	Validate before deployment

### 3. Think Tank Platform

#### 3.1 Problem Solving Engine

Feature	Description	How It Fits
<b>Problem Decomposition</b>	Breaks complex problems into parts	Makes hard problems tractable
<b>Multi-Step Reasoning</b>	Chain-of-thought with recorded steps	Transparent reasoning process
<b>Solution Synthesis</b>	Combines step outputs into answer	Coherent final solutions
<b>Confidence Scoring</b>	0-1 quality score per step and overall	Users know reliability

#### 3.2 Session Management

Feature	Description	How It Fits
<b>Persistent Sessions</b>	Save and resume any session	Long-running problem solving
<b>Session History</b>	All steps recorded with metadata	Audit trail, learning
<b>Conversation Threads</b>	Multiple conversations per session	Organize follow-ups
<b>Artifact Storage</b>	Code, diagrams, documents as outputs	Tangible deliverables

#### 3.3 Domain Modes (8)

Mode	Description	How It Fits
<b>Research</b>	Academic research, fact-finding	Source citation, verification
<b>Engineering</b>	System design, architecture	Code artifacts, diagrams
<b>Analytical</b>	Math, statistics, data analysis	Step-by-step proofs
<b>Creative</b>	Writing, ideation, design	Multiple alternatives
<b>Legal</b>	Contracts, compliance	Risk assessment
<b>Medical</b>	Clinical analysis (HIPAA)	PHI sanitization
<b>Business</b>	Strategy, planning	Framework application
<b>General</b>	Mixed problems	Dynamic mode switching

### 3.4 Collaboration

Feature	Description	How It Fits
<b>Real-Time Sync</b>	WebSocket live updates	Multiple users see changes instantly
<b>Collaboration Roles</b>	Owner, Editor, Viewer, Commenter	Appropriate access control
<b>Cursor Presence</b>	See other users' positions	Awareness of collaborators
<b>Shared Sessions</b>	Invite others to sessions	Team problem solving

---

## 4. Billing & Cost Management

### 4.1 Credit System

Feature	Description	How It Fits
<b>Credit Accounts</b>	Pre-paid credit balances	Simple usage-based billing
<b>Credit Transactions</b>	Detailed usage history	Transparency on spending
<b>Auto-Refill</b>	Automatic top-up at threshold	Uninterrupted service
<b>Credit Alerts</b>	Low balance notifications	Avoid service interruption

### 4.2 Subscriptions

Feature	Description	How It Fits
<b>Plan Tiers</b>	Free Trial, Individual, Pro, Enterprise	Options for all user types
<b>Feature Gating</b>	Features by plan level	Upsell path
<b>Usage Limits</b>	Tokens/requests per plan	Fair resource allocation
<b>Stripe Integration</b>	Payment processing	Industry-standard payments

### 4.3 Cost Management

Feature	Description	How It Fits
<b>Budget Alerts</b>	Spending limit notifications	Prevent cost overruns
<b>Cost Estimation</b>	Pre-request cost estimates	Informed decisions
<b>Usage Analytics</b>	Spend by model, user, time	Optimize usage patterns
<b>Invoice Generation</b>	Automated monthly invoices	Accounting integration

---

## 5. Multi-Tenant Platform

### 5.1 Tenant Management

Feature	Description	How It Fits
<b>Tenant Isolation</b>	Complete data separation	Security, privacy
<b>Tenant Settings</b>	Per-tenant configuration	Customization
<b>Tenant Onboarding</b>	Self-service signup	Scalable growth
<b>Tenant Suspension</b>	Disable/enable tenants	Account management

## 5.2 User Management

Feature	Description	How It Fits
<b>User Accounts</b>	Individual user identities	Personalization, audit
<b>Role-Based Access</b>	Admin, User, Viewer roles	Appropriate permissions
<b>User Preferences</b>	Model preferences, settings	Personal customization
<b>User Activity</b>	Usage tracking per user	Analytics, billing

## 5.3 API Key Management

Feature	Description	How It Fits
<b>API Key Generation</b>	Create scoped keys	Programmatic access
<b>Key Rotation</b>	Scheduled key rotation	Security best practice
<b>Key Scopes</b>	Limit key permissions	Least privilege
<b>Key Analytics</b>	Usage per key	Monitor applications

# 6. Security & Compliance

## 6.1 Data Security

Feature	Description	How It Fits
<b>Row-Level Security</b>	PostgreSQL RLS policies	Automatic tenant isolation
<b>Encryption at Rest</b>	AES-256 encryption	Data protection
<b>Encryption in Transit</b>	TLS 1.3	Secure communication
<b>KMS Key Management</b>	AWS KMS for secrets	Secure key storage

## 6.2 Authentication

Feature	Description	How It Fits
<b>Cognito Integration</b>	AWS Cognito user pools	Enterprise-grade auth
<b>JWT Tokens</b>	Secure session tokens	Stateless auth
<b>MFA Support</b>	Multi-factor authentication	Enhanced security
<b>SSO/SAML</b>	Enterprise SSO integration	Corporate identity

Feature	Description	How It Fits
---------	-------------	-------------

### 6.3 Compliance

Feature	Description	How It Fits
<b>SOC2 Controls</b>	Security controls	Enterprise compliance
<b>HIPAA Mode</b>	Healthcare compliance	Medical use cases
<b>PHI Sanitization</b>	Automatic PII detection	Protect patient data
<b>Audit Logging</b>	Comprehensive audit trail	Compliance reporting
<b>Data Residency</b>	Region-specific deployment	Regulatory requirements

## 7. Analytics & Monitoring

### 7.1 Usage Analytics

Feature	Description	How It Fits
<b>Request Metrics</b>	Requests by model, user, time	Usage patterns
<b>Token Tracking</b>	Input/output token counts	Cost attribution
<b>Latency Metrics</b>	Response time tracking	Performance monitoring
<b>Error Rates</b>	Failure tracking	Reliability monitoring

### 7.2 Model Performance

Feature	Description	How It Fits
<b>Quality Scores</b>	Model quality over time	Identify degradation
<b>Comparison Reports</b>	Model vs model analysis	Model selection
<b>A/B Testing</b>	Test model variations	Optimize choices
<b>Learning Data</b>	ML training data collection	Continuous improvement

### 7.3 Business Intelligence

Feature	Description	How It Fits
<b>Dashboard</b>	Executive metrics view	Quick status
<b>Custom Reports</b>	Build custom analytics	Specific insights
<b>Export</b>	CSV/PDF export	External analysis
<b>Alerts</b>	Threshold notifications	Proactive monitoring

## 8. Developer Tools

### 8.1 SDK

Feature	Description	How It Fits
<b>TypeScript SDK</b>	Type-safe client library	Developer productivity
<b>API Documentation</b>	OpenAPI/Swagger docs	Self-service integration
<b>Code Examples</b>	Sample implementations	Quick start
<b>Playground</b>	Interactive API testing	Experimentation

### 8.2 Webhooks

Feature	Description	How It Fits
<b>Event Webhooks</b>	Push notifications for events	Real-time integrations
<b>Webhook Management</b>	Create, update, delete hooks	Self-service config
<b>Retry Logic</b>	Automatic retry on failure	Reliability
<b>Webhook Logs</b>	Delivery history	Debugging

### 8.3 Integrations

Feature	Description	How It Fits
<b>Slack Integration</b>	Notifications to Slack	Team communication
<b>Zapier Connect</b>	5000+ app integrations	Automation
<b>Custom Webhooks</b>	HTTP POST to any endpoint	Flexible integration

---

## 9. Admin Dashboard

### 9.1 Dashboard Pages

Page	Description	How It Fits
<b>Overview</b>	System health, key metrics	At-a-glance status
<b>Tenants</b>	Tenant management	Customer administration
<b>Users</b>	User administration	Access control
<b>Models</b>	Model configuration	AI management
<b>Orchestration</b>	Workflow patterns	Pattern management
<b>Analytics</b>	Usage reports	Business intelligence
<b>Billing</b>	Revenue, invoices	Financial management
<b>Security</b>	Audit logs, compliance	Security oversight
<b>Settings</b>	Platform configuration	System settings

## 9.2 UI Features

Feature	Description	How It Fits
<b>Responsive Design</b>	Mobile-friendly	Access anywhere
<b>Dark Mode</b>	Light/dark themes	User preference
<b>Search</b>	Global search	Find anything quickly
<b>Filters</b>	Advanced filtering	Narrow results
<b>Bulk Actions</b>	Multi-select operations	Efficiency

## 10. Swift Deployer App

### 10.1 Deployment Features

Feature	Description	How It Fits
<b>CDK Deployment</b>	One-click AWS deployment	Simple infrastructure setup
<b>Progress Tracking</b>	Real-time deployment status	Visibility into process
<b>Stack Management</b>	Deploy individual stacks	Granular control
<b>Rollback</b>	Revert failed deployments	Safety net

### 10.2 QA & Testing

Feature	Description	How It Fits
<b>Test Suites</b>	Run unit/integration tests	Quality assurance
<b>Test Results</b>	Pass/fail reporting	Quick feedback
<b>Coverage Reports</b>	Code coverage metrics	Quality metrics

### 10.3 AI Assistant

Feature	Description	How It Fits
<b>Deployment Guidance</b>	AI helps with deployment	Reduces errors
<b>Error Diagnosis</b>	AI analyzes failures	Faster resolution
<b>Best Practices</b>	AI suggests improvements	Optimization

### 10.4 Local Storage

Feature	Description	How It Fits
<b>SQLCipher DB</b>	Encrypted local storage	Secure credentials
<b>AWS Profiles</b>	Multiple AWS accounts	Environment management
<b>Deployment History</b>	Past deployment records	Audit trail

## **RADIANT Feature Reference v4.18.0**

*106+ models • 49 patterns • 9 modes • Enterprise-grade*
