## Tenant Administrator Authentication Guide

**Version:** 5.52.29 | **Last Updated:** January 25, 2026 | **Audience:** Tenant Administrators

This guide covers authentication management for tenant administrators: configuring SSO, managing users, enforcing MFA policies, and handling security settings for your organization.

---

## Overview

As a Tenant Administrator, you manage authentication for users within your organization. You have access to:

Capability	Description
<b>SSO Configuration</b>	Set up and manage enterprise identity providers
<b>User Management</b>	Invite, suspend, and remove users
<b>MFA Policies</b>	Require or recommend MFA for user groups
<b>Session Policies</b>	Configure timeout and concurrent session limits
<b>Security Monitoring</b>	View authentication logs and failed attempts
<b>OAuth Apps</b>	Manage third-party application access

## Single Sign-On (SSO) Configuration

### Supported Protocols

Protocol	Use Case	Providers
<b>SAML 2.0</b>	Enterprise IdPs	Okta, Azure AD, OneLogin, Ping
<b>OIDC</b>	Modern identity providers	Auth0, Google Workspace, custom

### Setting Up SAML 2.0

1. Navigate to **Admin → Authentication → SSO**
2. Click **Configure SAML Provider**
3. Enter your identity provider details:

Field	Description	Example
<b>IdP Entity ID</b>	Unique identifier from your IdP	<a href="https://idp.yourcompany.com/entity">https://idp.yourcompany.com/entity</a>
<b>SSO URL</b>	Where users are redirected to sign in	<a href="https://idp.yourcompany.com/sso">https://idp.yourcompany.com/sso</a>
<b>Certificate</b>	X.509 certificate for signature verification	Paste PEM-encoded certificate
<b>Name ID Format</b>	User identifier format	<code>emailAddress</code> (recommended)

4. Download the **RADIANT Service Provider metadata** to import into your IdP
5. In your IdP, configure attribute mappings:

IdP Attribute	RADIANT Attribute	Required
<code>email</code>	<code>email</code>	Yes
<code>firstName</code>	<code>given_name</code>	Yes
<code>lastName</code>	<code>family_name</code>	Yes
<code>groups</code>	<code>groups</code>	Optional
<code>department</code>	<code>department</code>	Optional

6. Click **Test Connection** to verify the setup
7. Enable **SSO** for new users and/or existing users

sequenceDiagram

```
    participant User
    participant RADIANT
    participant IdP as Your IdP

    User->>RADIANT: Enter work email
    RADIANT->>RADIANT: Lookup SSO config
    RADIANT->>IdP: SAML AuthnRequest
    IdP->>User: Login page
```

```

User->>IdP: Enter credentials
IdP->>RADIANT: SAML Response
RADIANT->>RADIANT: Validate & create session
RADIANT->>User: Redirect to app

```

## Setting Up OIDC

1. Navigate to **Admin → Authentication → SSO**
2. Click **Configure OIDC Provider**
3. Enter your identity provider details:

Field	Description	Example
<b>Issuer URL</b>	OIDC discovery endpoint	<code>https://idp.yourcompany.com</code>
<b>Client ID</b>	Application identifier	<code>abc123</code>
<b>Client Secret</b>	Application secret	(secure input)
<b>Scopes</b>	Requested permissions	<code>openid profile email</code>

4. Configure the **redirect URI** in your IdP: `https://[your-domain]/api/auth/oidc/callback`
5. Click **Test Connection**
6. Enable for users

## SSO Options

Option	Description	Default
<b>Auto-provision users</b>	Create users automatically on first SSO sign-in	Off
<b>Require SSO</b>	Disable password sign-in for SSO users	Off
<b>JIT group sync</b>	Sync group memberships from IdP	Off
<b>Allow bypass for admins</b>	Let tenant admins use password if SSO fails	On

## User Management

### Inviting Users

1. Navigate to **Admin → Users**
2. Click **Invite User**
3. Enter the user's **email address**
4. Select their **role**:
  - **Member**: Standard user access
  - **Admin**: Can manage users and settings
  - **Owner**: Full tenant control
5. Optionally add to **groups**
6. Click **Send Invitation**

The user receives an email with a link to create their account.

## User Roles and Permissions

Role	Users	Settings	Billing	SSO Config
<b>Member</b>	View self	View	—	—
<b>Admin</b>	Manage all	Manage	View	Configure
<b>Owner</b>	Manage all	Manage	Manage	Configure

## Suspending Users

1. Navigate to **Admin → Users**
2. Find the user and click → **Suspend**
3. Confirm the suspension

Suspended users:  
- Cannot sign in  
- Lose access to all applications  
- Keep their data (can be restored)  
- Can be unsuspended later

## Removing Users

1. Navigate to **Admin → Users**
  2. Find the user and click → **Remove**
  3. Choose data handling:
    - **Transfer data:** Move to another user
    - **Archive data:** Keep for compliance
    - **Delete data:** Permanent removal (after retention period)
  4. Confirm removal
- 

## MFA Policies

### Policy Options

Policy	Description	Applies To
<b>Required</b>	Users must set up MFA before accessing apps	Admins (always), or all users
<b>Encouraged</b>	Users see a prompt but can skip (for now)	Members
<b>Hidden</b>	MFA option not shown to these users	Standard users (default)

## Configuring MFA Policy

1. Navigate to **Admin → Security → MFA Policy**
2. For each user role, select the policy:

Role	Recommended Policy
<b>Owner</b>	Required (cannot change)

Role	Recommended Policy
<b>Admin</b>	Required (cannot change)
<b>Member</b>	Encouraged or Hidden

3. Configure **grace period** for “Required” policy (days before enforcement)
4. Click **Save Policy**

## MFA Methods Allowed

Enable or disable MFA methods for your organization:

Method	Description	Recommendation
<b>TOTP</b>	Authenticator apps (Google, Microsoft, etc.)	Enable (most secure)
<b>Backup Codes</b>	10 one-time recovery codes	Enable (for recovery)
<b>Trusted Devices</b>	Remember this device for 30 days	Enable (convenience)

## Viewing MFA Status

1. Navigate to **Admin → Users**
2. The MFA column shows:
  - **Enabled:** MFA is set up
  - **Pending:** Required but not yet set up
  - — **Not available:** Policy is “Hidden”

## Resetting User MFA

If a user loses access to their authenticator:

1. Navigate to **Admin → Users**
2. Find the user and click → **Reset MFA**
3. Confirm the reset

The user will need to set up MFA again on their next sign-in.

## Session Management

### Session Policies

Configure how long sessions last and concurrent session behavior:

Setting	Description	Default
<b>Session timeout</b>	Inactivity before auto-logout	7 days
<b>Absolute timeout</b>	Maximum session length	30 days
<b>Concurrent sessions</b>	Max sessions per user	5

Setting	Description	Default
<b>Session on new device</b>	Require re-auth on new device	Yes

## Viewing Active Sessions

1. Navigate to **Admin → Security → Active Sessions**
2. View all active sessions with:
  - User email
  - Device/browser info
  - Location (approximate)
  - Last activity
  - Session start time

## Terminating Sessions

To force a user to sign in again:

1. Find the session in **Active Sessions**
2. Click **Terminate**
3. The user is immediately logged out

To terminate all sessions for a user:

1. Navigate to **Admin → Users**
2. Find the user and click → **Terminate All Sessions**

## Security Settings

### Password Policy

Configure password requirements for users who don't use SSO:

Setting	Description	Default	Range
<b>Minimum length</b>	Characters required	12	8-128
<b>Require uppercase</b>	At least one uppercase letter	Yes	—
<b>Require lowercase</b>	At least one lowercase letter	Yes	—
<b>Require number</b>	At least one digit	Yes	—
<b>Require special</b>	At least one symbol	Yes	—
<b>Password history</b>	Prevent reusing recent passwords	5	0-24
<b>Maximum age</b>	Days before password expires	0 (never)	0-365

## Account Lockout

Protect against brute-force attacks:

Setting	Description	Default
<b>Lockout threshold</b>	Failed attempts before lockout	5
<b>Lockout duration</b>	Minutes until auto-unlock	15
<b>Reset counter after</b>	Minutes of no failed attempts	10

## IP Restrictions

Limit access to specific IP ranges:

1. Navigate to **Admin** → **Security** → **IP Restrictions**
2. Click **Add Rule**
3. Enter an **IP address** or **CIDR range**
4. Select **Allow** or **Block**
5. Click **Save**

Example rules: - 10.0.0.0/8 — Allow corporate network - 192.168.1.100 — Allow specific IP - 0.0.0.0/0 with Block — Block all (except allowed)

---

## Audit Logs

### Viewing Authentication Logs

1. Navigate to **Admin** → **Security** → **Audit Logs**
2. Filter by:
  - **Event type:** Sign-in, Sign-out, MFA, Password change, etc.
  - **User:** Specific user email
  - **Date range:** Custom time period
  - **Status:** Success, Failure

### Log Events Captured

Event	Description	Details Logged
auth.signin.success	Successful sign-in	User, device, location, method
auth.signin.failure	Failed sign-in attempt	User (if known), reason, IP
auth.signout	User signed out	User, session duration
auth.mfa.setup	MFA configured	User, method
auth.mfa.verified	MFA code accepted	User, method
auth.mfa.failed	MFA code rejected	User, attempt count
auth.password.changed	Password updated	User
auth.password.reset	Password reset via email	User, IP
auth.session.terminated	Session forcibly ended	User, by admin

### Exporting Logs

1. Apply desired filters
2. Click **Export**

3. Select format: **CSV** or **JSON**
4. Download the file

Logs are retained for **90 days** by default (configurable per compliance requirements).

---

## OAuth Applications

Manage third-party applications that can access your organization's data.

### Viewing Connected Apps

1. Navigate to **Admin** → **Security** → **OAuth Applications**
2. View all authorized applications with:
  - Application name
  - Publisher
  - Permissions granted
  - Users who authorized
  - Last used

### Revoking App Access

To remove an application's access for all users:

1. Find the application in the list
2. Click **Revoke Access**
3. Confirm the revocation

All tokens for that application are immediately invalidated.

### App Permissions (Scopes)

Scope	Access Level
<code>read:profile</code>	User's name and email
<code>read:sessions</code>	User's Think Tank sessions
<code>write:sessions</code>	Create and modify sessions
<code>read:files</code>	User's uploaded files
<code>write:files</code>	Upload and delete files
<code>admin:users</code>	Manage organization users

---

## Language & Localization

### Default Language

Set the default language for new users in your organization:

1. Navigate to **Admin** → **Settings** → **Localization**
2. Select **Default Language** from the dropdown
3. Click **Save**

## Available Languages

Language	Code	Direction
English	en	LTR
Spanish	es	LTR
French	fr	LTR
German	de	LTR
Japanese	ja	LTR
Korean	ko	LTR
Chinese (Simplified)	zh-CN	LTR
Chinese (Traditional)	zh-TW	LTR
<b>Arabic</b>	<b>ar</b>	<b>RTL</b>
<i>(14 more)</i>	—	—

## Language Override

Users can override the default language in their personal settings.
